- `skipLibCheck`` `typings`` `process.env``
- `config`` `process.env``
- `metrics: `disk`, `cpu`, `ram`` Prometheus.
- `main.ts``

API 101 - Introduction

API is a set of rules that defines how different software applications should communicate. It is a contract between two applications. API defines the methods and data formats that the applications can use to interact with each other. REST is a style of API.
